

Litter Prevention

Litter looks ugly, damages our planet, and hurts all of us. It's up to us to fix this, but it's as easy as 1-2-3, so start today!

1: JUST DON'T DO IT!

Never intentionally litter. Always dispose of recycling and trash responsibly.

2: PUT A LID ON IT!

Control your stuff. Always use covered recycling bins and trash cans, but don't overfill since litter will spill out.

Watch out for the power of the wind and water, which along with inattention, are the leading causes of careless littering.

3: LIVE SMART!

REDUCE and REUSE to avoid creating unnecessary recycling and trash that can become litter. Plus, you'll save money and there will be more natural resources and energy for us and future generations.
